This sequence represents the hydrophobic domain containing protein, clone HP00651 coding region. The sequence is isolated from a human stomach cancer call line. The HP02403 protein contains one putative transmembrane domain. The protein shows homology to the japanese quail apoptosis

Claim 3; Page 84; 117pp; English.

Novel human proteins having hydrophobic domains used diagnostic purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human member of Bcl-2 family Bcl-B protein and its corresponding nucleic acid. Bcl-B is useful in treating a subject having or at risk of a disorder associated with apoptosis, such as cell degenerative or proliferative disorder like neural or muscle degeneration, e.g. Alrheimer's disease, Creutzfeldt-Jacob's disease (CJD), Machado-Joseph disease (MJD), Parkinson's disease, Huntington's disease (HJD), spinocerabellar ataxias 1, 2 and 6 (SCA-1, - 2 and -6), dentatorubropallidoluysian atrophy (DRPLA), Kennedy's disease, stroke, ischaemia, head trauma, neoplasia, autoimmune disorder or fibrotic condition. The transgenic animals are used as in vivo models to study apoptosis and potential therapies for apoptosis. The present sequence is human Bcl-B DNA. Bcl-B gene is located at chromosome 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 200

The sequence is isolated from a human stomach cancer cell line. The HP02403 protein contains one putative transmembrane domain. The protein shows homology to the japanese quail apoptosis regualtor NR-13. The invention relates to human proteins with hydrophobic domains, the DNA and the cDNA encoding them. The polynucleotides and proteins are predicted to have biological activities which make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Suggested activities include nutritional activity (nutritional source or supplement); cytokine and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human connective trissue related polypeptides (AAU86435-AAU86923) and the polypucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polypucleotide sequences of the invention are also useful igene therapy. ABK41613-ABK42101 represent cDNA sequences encoding the novel human connective tissue related polypeptides. Note: The sequence data for this patent did not form part of the printed specification, by was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                       antiarteriosclerotic; immunosuppressive; antirheumatic; antiarthritic; antiinflammatory; antiallergic; antiasthmatic; dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid encoding novel connective tissue associated used in diagnosing, preventing, treating or ameliorating as cancer or rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The polypeptide or polynucleotide encoding connective tissue antiques (CTA). The polypeptide or polynucleotide is useful for preventing, treating, or ameliorating medical conditions in a mammal. The connective tissue polypeptides, polynucleotides and antibodies are particularly useful for treating, preventing and/or prognosing disorders of connective tissues (e.g. rheumatoid arthritis, discoid and systemic lupus erythematosus, scleroderma, or Sjogren's syndrome), cancers, cancer metastases and/or neoplasias (e.g. leukaemia), neurodegenerative disorders (e.g. Alzheimer's disease, or Parkinson's disease), cardiovascular diseases (e.g. atherosclerosis, myocarditis or cardiopulmonary bypass complications), autoimmune diseases (e.g. systemic lupus erythematosus, autoimmune diseases (e.g. systemic lupus erythematosus, complications),       09-AUG-2001.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC 2-like polypeptides (PEP1). The NAM1 and PEP1 may be used in the CC prevention, diagnosis and treatment of diseases associated with CC inappropriate Bc1-2-like polypeptides' expression. The NAM1 may be used CC to produce the soluble Bc1-2-like polypeptides by standard recombinant CC methodolgy. The polypeptides may also be used as antigens in the production of antibodies against Bc1-2 and in assays to identify CC modulators of Bc1-2 expression and activity. The anti-Bc1-2 antibodies and antagonists may be used to down regulate expression and activity. The anti-Bc1-2 antibodies CC and antagonists may also be used as diagnostic agents for detecting the presence of Bc1-2 polyps in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). Disorders that may be prevented, diagnosed CC immunosorbant assay (ELISA). Disorders that may be prevented, diagnosed CC and/or treated by the above methods include, immunodeficiencies (e.g. a cC gammaglobulinemia and B cell lymphoproliferative disorder), autoimmune CC disorders (e.g. rheumatoid arthritis and Grave's disease), allergic CC reactions, inflammations, respiratory diseases and cardiovascular CC disorders (a full list of disorders is given in the specification). The present sequence represents a human Bc1-2-like polypeptide encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, CC of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the CC degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central canders, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation. The method allows the methylation CC status of many C residues to be determined simultaneously. ABQ13410-CC ABQ54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 101;

                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpC-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on CC the amplicon. From the ratio of labels hybridised to the two classes of CC oligomers, the degree of methylation is calculated. The method is used in for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central CC nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation of cell or tissue types and for civestigating cell differentiation of cell or tissue types and for crows from the crowders of be determined simultaneously. ABQ13410-CC Rap54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention

                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel method for determining the degree of cmethylation of a particular cytosine in a motif 5'-CpG-3', present in a cytosine (C) but not methylated C, to uracil, then part of the genomic Cytosine (C) but not methylated C, to uracil, then part of the genomic ChA that contains the target C is amplified to form a labeled amplicon. CT he amplicon is hybridised to two classes, each with at least one member, CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the cC degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of cligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs cand of a wide range of diseases, e.g. cancer, disorders of the central construing, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (CC garticularly by detecting mutations or single nucleotide polymorphisms convestigating cell differentiation. The method allows the methylation convestigating cell differentiation. The method allows the methylation convestigating cell differentiation. The method allows the methylation convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation. The method allows the methylation convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation of cell or tissue types and for convestigating cell differentiation described in the method for determining the degree of cytosine methylation described in the convertion.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a Genomic sample of DNA. The sample is treated chemically to convert CC Cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, CC of oligonuclectides and/or peptide-nucleic acid (PNA) oligoners and the CC degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of coligoners, the degree of methylation is calculated. The method is used configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately configurately con

consen rrom sequence or ys numan probes and 2046 mouse probes. An array consuse or human sample containing nucleic acid, by contacting the array cuth the sample under conditions allowing selective hybridisation, and compared to produce an expression profile of a first labelled sample to the array to groduce an expression profile. The array is also useful for determining an expression profile of a first labelled sample containing nucleic acid crelative to a second, differently labelled sample containing nucleic acid for determining an expression profile diagnostic of an energy-metabolism-related physiological condition. An array of the invention is useful for determining mitochondrial biology gene expression profiles of organisms, such physiological conditions, the invention is useful for determining mitochondrial biology gene expression profiles of such organisms, which are useful for determining expression profiles of such organisms, which are useful for determining expression profiles of identifying biochemical conditions, genes, and mutations involved in such physiological conditions, involved in such physiological conditions, conditions, genes, and creating and/or monitoring the efficacy of such therapies, and creating and identifying animal models of human cenergy metabolism-related physiological conditions. An array is also useful for defining expression signatures or profiles for mitochondrial conditaitive phosphorylation (OXPHOS) dysfunction, oxidative stress, cappitosis and aging. An array of the invention contains probes of genes not previously recognised to participate in mitochondrial biology. The sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA colors useful for monitorial biology. The sequences used to make the probes of the invention. Some sequences are not present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905, cappides and 2643.
Array containing probes for genes involved in mitochondrial biology, useful for determining mitochondrial biology gene expression profiles use in diagnosing pathologies and identifying biochemical pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ds; mouse; array; mitochondrial; hybridisation; energy-metabolism; mitochondrial disease; oxidative phosphorylation dysfunction; oxidative stress; apoptosis; aging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a gene involved in mitochondrial biology. The array comprises two or more isolated nucleic acid molecules or spots, each molecule having a sequence chosen from sequence of 994 human probes and 2046 mouse probes. An array
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-AUG-2001;

         A cDNA clone (AAT33800) codes for murine interleukin-17 receptor (IL-17R) (AAW04184), a type I transmembrane protein. A cDNA library of murine thymoma EL4 cells was used to transform CV1/EBNA cells and the prods. were screened for binding to a fusion between the Fc region of human IgG1 (see also AAW02305) and the viral IL-17 homologue HVS13 (AAW02387). A positive clone contained a 3.2 kb insert that included the IL-17R open recombinant IL-17R in transformed host cells or to transfect a tissue or organ as a means of suppressing graft rejection. It was also used to identify a cDNA clone (AAT33801) coding for human IL-17R (AAW04185)

This cDNA sequence codes for mouse full-length interleukin-17 (IL-17) receptor (see AAW61271). It can be used for the production of recombinant IL-17 receptor polypeptides, especially a soluble polypeptide comprising the signal peptide and extracellular domain of murine IL-17 receptor, in prokaryotic or eukaryotic (for glycosylated products) expression systems. A claimed method for reducing the amount of nitric oxide produced by a cartilage associated cell comprises contacting the cell receptor, especially soluble murine or human (see AAW61272) IL-17 receptor, IL-17 is known to stimulate nitric oxide production from cartilage-associated cells in individuals with osteoarthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides have immunoregulatory activity. They can be used for inhibiting T cell proliferation, or for inhibiting T cell activation. In particular they can be used for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma. They can also be used for the prevention or treatment of inflammatory disease in which activated T cells play a role or for inhibiting B cell proliferation or immunoglobulin secretion. The II-17 polypeptides can also be used as immunogens, reagents in in vitro assays, or as binding agents for affinity purification procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Murine interleukin-17 receptor coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              04-DEC-2000

Regulating an immune or inflammatory response in a mammal comprises administering soluble IL-17R. Fragments comprise residues 1-322 of the murine IL-17R. residues 1-320 of the human IL-17R, and fragments of the extracellular domain that bind IL-17. The method is useful for regulating an immunoresponse, for treating or preventing diseases like allergy, asthma and autoimmune diseases, and for suppressing rejection of grafted organs or tissues in the recipient

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

/note="Vector: psport1 (Invitrogen); Site_1: Sall; Site_2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs. Double-stranded cDNAs were synthesized with an Oligo(dT)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of psporti plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1. .486

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note="Vector: pSPORT1 (Invitrogen); Site_1: Sall; Site_2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs. Double-stranded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                254

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker Li-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."

This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs.

Double-granded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             primer [Invitrogen:

This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs. Double-stranded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /clone="NIA:B0978E08 IMAGE:30479767"
